Every year, the National Weather Service (NWS) in Topeka presents weather safety and information talks which are open to the general public. Presentations are typically around 90 minutes long, and are given by a meteorologist from our office. The 2019 show will focus on severe storm safety, preparedness, and awareness. Storm structure and accurate identification of important cloud features associated with supercell and squall line thunderstorms are also touched on.

While attending a talk we provide you with our contact information. We encourage everyone to call the NWS once it is safe to do so to pass along critical information about any severe weather you experience. We may also call you at your home after the severe weather has passed to inquire about possible damage or hail size.

Additional valuable online spotter training videos can be found via the **NWS Norman website:**
